Greetings,

Thank you for your interest in the Field Management of Chemical & Biological Casualties Course (FCBC).

International military student applicants must first contact the Security Assistance Office in the United States Embassy of their country. The embassy will then contact the Office of the Army Surgeon General (OTSG) for further assistance in the registration process. All international military student applicants must be approved and cleared through the OTSG Military International Students Office. Tuition fee information will be provided by OTSG.

If you have questions, concerns or just want to talk with one of the instructors about the course, feel free to call CCCD any time.

Sincerely,

The Chemical Casualty Care Division
